

**SOMAIYA**  
VIDYAVIHAR UNIVERSITY

K J Somaia College of Engineering

## **Syllabus**

**B. Tech Computer Engineering  
(Third Year Semester V and VI)**

**From**

**Academic Year 2022-23**

**(Revision-1)**

**Approved by FOET 08/05/2022 and AC 06/07/2022**

**TY B. Tech / COMP / Revision 1.0**

**K J Somaia College of Engineering, Mumbai-77**

**(A Constituent College of Somaia Vidyavihar University)**

### **Preamble**

KJSCE as a constituent college of Somaiya Vidyavihar University has the academic flexibility to develop and implement its own curriculum *KJSCE-SVU-2020* with features such as inclusion of choice based Open Elective Courses, Add on Credit / Audit Courses, Exposure Courses, etc. Distinct assessment and evaluation methods are also designed based on focus of individual courses. The outcome of this entire exercises; either by way of student placements or the feedback received from all stakeholders is quite encouraging.

At present, Industry is moving towards Industrial revolution 4.0. Knowing very well that every country's education system forms the basis of its progress and the groundwork for its future, we need to be making engineering graduates equipped to take industrial challenges. A common feature in successful education systems is the balance between tradition and the capacity to be flexible and able to adapt to current social trends. To achieve this, Somaiya Vidyavihar University allows for the undergraduate courses to have a focus on the changing industrial scenario.

Our new revision in syllabus *KJSCE-SVU-2020*, introduced from the academic year 2020-21, has been designed based on the revised guidelines from various accrediting bodies.

The said syllabus is a result of expert advice from members of Board of Studies, Faculty of Engineering & Technology and Academic Council; both having due representation from academia as well as appropriate industries. Subsequently faculty members of the college have put in efforts to document it in the form which has been presented here.

Some of the highlights of the *KJSCE-SVU-2020* syllabus are: Introduction of wide choice for branch specific electives, more number of open or interdisciplinary electives, opportunity for internships, etc. Courses like Object Oriented Programming Methodology, Full Stack Development and Digital Design are designed as laboratory oriented courses and pay more attention to hands-on learning. There is also an emphasis on project based learning (PBL) through courses like Mini-projects and PBL is also encouraged through projects as part of various courses.

Focus of academic processes in KJSCE is such that, by the time student completes the requirements of the degree, he/ she will be able to acquire attributes required for profession as an engineer. Outcomes are defined to acquire these attributes which lead to development of curriculum, pedagogy and assessment tools. These tools need to be updated based on experiences of teacher and learner. Hence teaching -learning -evaluation paradigm is going to be a mix of traditional as well as use of ICT tools. Role of the faculty member changes from tutor to trainer / instructor/ facilitator / mentor based on the outcomes targeted.

For measuring learning outcomes of students, traditional methods like tests, laboratory work and End Semester Examinations (ESE) are implemented. Continuous Assessment (CA) is carried out through tests and internal assessment (IA) like quizzes, case studies, mini projects etc. These IA tools enable the students to develop competencies through solutions discussed, improvisations suggested, feedbacks given by faculty members. Through these assessment methods students get opportunity for reading research papers, presenting ideas and working in a team.

Since the assessments are distributed throughout the term the learning process is continuously monitored and graded.

The Department of Computer Engineering courses focus on thrust areas of Department. These areas are Intelligent System and Data Processing, Network System and Security, Image Analysis and Interpretation and System & Software Engineering.

College promotes co-curricular, extra-curricular activities as well as sports; making life outside classroom exciting and rewarding. What makes these activities very effective is the fact that these do not focus only on winning trophies but try to nurture generic skills such as leadership, effective communication, teamwork etc. which are essential skills for a bright professional career.

Along with my colleagues, I welcome you to Department of Computer Engineering and look forward to lead you towards professional career.

Dr. Deepak Sharma  
Head  
Department of Computer Engineering

**Dr. Shubha Pandit**  
**Principal and Dean**  
**Faculty of Engineering and Technology**

## **Vision**

To become a center of excellence in discipline of Computer Engineering for developing technically adept professionals with ethical and leadership qualities in service of society.

## **Mission**

- Provide sound technical foundation in Computer Engineering through comprehensive curriculum and application oriented learning.
- Provide ambience for professional growth and lifelong learning for adapting to challenges in rapidly changing technology
- Inculcate social and ethical values and leadership qualities

## **Program Educational Outcomes (PEO)**

A graduate of Computer Engineering will

**PEO1.** Solve problems in diverse fields using knowledge of Computer Engineering.

**PEO2.** Excel in professional career, exhibit leadership qualities with ethics & soft skills.

**PEO3.** Pursue higher education, research or entrepreneurship, engage in professional development, adapt to emerging technologies.

## **Program Outcomes (PO)**

After successful completion of the program Computer Engineering Graduate will be able to:

**PO1. Engineering knowledge:** Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

**PO2. Problem analysis:** Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

**PO3. Design/development of solutions:** Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

**PO4. Conduct investigations of complex problems:** Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

**PO5. Modern tool usage:** Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities

with an understanding of the limitations.

- PO6. The engineer and society:** Apply reasoning informed by the contextual knowledge to assess societal, cultural, environmental, health, safety and legal issues relevant to the professional engineering practice; understanding the need of sustainable development
- PO7. Multidisciplinary Competence:** Recognize/ study/ analyze/ provide solutions to real-life problems of multidisciplinary nature from diverse fields
- PO8. Ethics:** Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
- PO9. Individual and team work:** Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
- PO10. Communication:** Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
- PO11. Project management and finance:** Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
- PO12. Life-long learning:** Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

### **Program Specific Outcomes (PSO)**

- PSO1:** Design, construct and implement hardware and software based modern Computing / Information systems with varying complexities
  - PSO2:** Demonstrate competence in designing, implementation and maintenance of computer based applications, computer-controlled equipment and networks of intelligent devices.
- .

**Course prerequisites (if any):**

-

**Course Objectives:**

The Course focusses at developing an understanding of software process models such as the waterfall and evolutionary models. It Further provides, an understanding of software requirements and the SRS documents. The course aims at enabling the students to prepare the system design and test cases for proper testing of the software.

**Course Outcomes:**

**At the end of successful completion of the course the student will be able to**

- CO1 Understand the software development process and Estimate different types of resources for the given project.
- CO2 Analyze the software requirements and Model the defined problem with the help of UML diagram.
- CO3 Prepare the System Design and Model
- CO4 Identify and manage configuration items and risks for the software
- CO5 Test the given software for different test cases with proper test planning.

**Course prerequisites (if any):** NA

**Course Objectives:**

1. To introduce concepts and fundamentals of data communication and computer networks.
2. To explore the inter-working of various layers of OSI.
3. To understand and apply IP addressing concepts in network design.
4. To assess the strengths and weaknesses of various routing algorithms.
5. To understand the transport layer and various application layer protocols.

**Course Outcomes:**

**At the end of successful completion of the course the student will be able to**

|          |   |
|----------|---|
| CO1<br>: | Explain the fundamentals of the data communication networks, reference models, topologies, physical media, devices, simulators and identify their use in day to day networks. |
| CO2      | Demonstrate Data Link Layer, MAC layer technologies & protocols and implement the functionalities like error control, flow control.   |
| CO3      | Demonstrate various network layer protocols and network design using IP addressing, forwarding, routing concepts.   |
| CO4      | Demonstrate Transport layer concepts like socket, flow control, error control, congestion control, QoS.   |
| CO5      | Describe various features and operations of application layer protocols such as Telnet, HTTP, DNS, SMTP.  |

**Course prerequisites (if any):**

Basics of Computer Organization and architecture

**Course Objectives:**

1. To introduce basic concepts and functions of operating systems.
2. To understand the concept of process, thread and resource management.
3. To understand the concepts of process synchronization and deadlock.
4. To understand various Memory, I/O and File management techniques.
5. To understand the designing and implementation of system software like Assembler.  
Macro preprocessor and linker loader.

**Course Outcomes**

**At the end of successful completion of the course the student will be able to**

- CO1: Identify the different system programs and their utility and Explain the fundamental concepts of operating system with extension to Unix and Mobile OS
- CO2: Illustrate and analyze the Process, threads, process scheduling and thread scheduling
- CO3: Describe the problems related to process concurrency and the different synchronization mechanisms available to solve them.
- CO4: Explain disk organization and file system structure with illustration of disk scheduling algorithms
- CO5: Understand Storage management with allocation, segmentation & virtual memory concepts

**Course Prerequisites (if any):**

Basic familiarity with fundamental algorithms and data structures, Good programming skills, Basics of linear algebra and geometry

**Course Objectives:**

1. Explain hardware, software and OpenGL Graphics Primitives.
2. Illustrate interactive computer graphic using the OpenGL.
3. Design and implementation of algorithms for 2D graphics Primitives and attributes.
4. Demonstrate Geometric transformations, viewing on both 2D and 3D objects.
5. Infer the representation of curves, surfaces, Color and Illumination models

**Course Outcomes**

At the end of successful completion of the course the student will be able to

CO1: Understand the basic concepts of computer graphics and OpenGL

CO2: Implement Fill area Primitives, 2D Geometric Transformations and 2D viewing

CO3: Implement Clipping, 3D Geometric Transformations and 3D viewing

CO4: Understand the computer Input & interaction, Curves and Computer Animation

**K. J. Somaiya College of Engineering, Mumbai-77**  
(A Constituent College of Somaiya Vidyavihar University)  
**Department of Computer Engineering**

| Module No. | Unit No. | Details  | Hrs. | CO  |
|------------|----------|--|------|-----|
| 1          |          | Introduction to Computer Graphics  | 7    |     |
|            | 1.1      | Basics of computer graphics, Application of Computer Graphics, Video Display Devices: Random Scan and Raster Scan displays   |      | CO1 |
|            | 1.2      | Introduction to Graphics software OpenGL ,coordinate reference frames, specifying two-dimensional world coordinate reference frames in OpenGL, OpenGL point functions, OpenGL line functions, point attributes, line attributes, curve attributes, OpenGL point attribute functions, OpenGL line attribute functions, Line drawing algorithms(DDA, Bresenham's), circle generation algorithms (Bresenham's). |      |     |
| 2          |          | Fill area Primitives, 2D Geometric Transformations and 2D viewing:   | 10   |     |
|            | 2..1     | Fill area Primitives: Polygon fill-areas, OpenGL polygon fill area functions, fill area attributes, general scan line polygon fill algorithm, OpenGL fill-area attribute functions   |      | CO2 |
|            | 2.2      | 2DGeometric Transformations: Basic 2D Geometric Transformations, matrix representations and homogeneous coordinates. Inverse transformations, 2DComposite transformations, other 2D transformations, raster methods for geometric transformations, OpenGL raster transformations, OpenGL geometric transformations function  |      |     |
|            | 2.3      | 2D viewing: 2D viewing pipeline, OpenGL 2D viewing functions   |      |     |
| 3          |          | Clipping,3D Geometric Transformations, Color and Illumination Models:  | 12   |     |
|            | 3.1      | Clipping: clipping window, normalization and viewport transformations, clipping algorithms,2D point clipping, 2D line clipping algorithms: cohen-sutherland line clipping only - polygon fill area clipping: Sutherland-Hodgeman polygon clipping algorithm only.  |      | CO3 |
|            | 3.2      | 3DGeometric Transformations: 3D translation, rotation, scaling, composite 3D transformations, other 3D transformations, affine transformations, OpenGL geometric transformations functions.  |      |     |

|  |  |  |    |     |
|--|--|--|----|-----|
|  | 3.3  | Color Models: Properties of light, color models, RGB and CMY color models. Illumination Models: Light sources, basic illumination models-Ambient light, diffuse reflection, specular and phong model, Corresponding openGL functions.  |    |     |
| 4  | 3D Viewing and Visible Surface Detection:          |  | 8  |     |
|  | 4.1  | 3DViewing:3D viewing concepts, 3D viewing pipeline, 3D viewing coordinate parameters , Transformation from world to viewing coordinates, Projection transformation, orthogonal projections, perspective projections, The viewport transformation and 3D screen coordinates. OpenGL 3D viewing functions. |    | CO3 |
|  | 4.2  | Visible Surface Detection Methods: Classification of visible surface Detection algorithms, depth buffer method only and OpenGL visibility detection functions.   |    |     |
| 5  | Input& interaction, Curves and Computer Animation: |  | 8  |     |
|  | 5.1  | Input and Interaction: Input devices, clients and servers, Display Lists, Display Lists and Modeling, Programming Event Driven Input, Menus Picking, Building Interactive Models, Animating Interactive programs, Design of Interactive programs, Logic operations.                                      |    | CO4 |
|  | 5.2  | Curved surfaces, quadric surfaces, OpenGL Quadric-Surface and Cubic-Surface Functions, Bezier Spline Curves, Bezier surfaces, OpenGL curve functions. Corresponding openGL functions.  |    |     |
| <b>Self Learning Component:</b> Vulkan API by the Khronos group (known for OpenGL) |  |  |    |     |
| Total  |  |  | 45 |     |

# Students should prepare all Self Learning topics on their own. Self-learning topics will enable students to gain extended knowledge of the topic. Assessment of these topics may be included in IA and Laboratory Experiments.

**Course prerequisites (if any):**

**Database systems**

**Course Objectives:**

The objectives of this course is to understand, design, manage data in Distributed, Parallel systems. Object Relational Databases ,Active, temporal, spatial, multimedia and deductive databases for managing different types of data . NOSQL system types to manage big data. Building and using data warehouse for Online Analytical Processing .

**Course Outcomes**

**At the end of successful completion of the course the student will be able to**

- CO1: Understand, design, analyze and process data in distributed, parallel, databases understand design.
- CO2 Understand the concepts and design of Active, temporal, spatial, multimedia and deductive databases.
- CO3 Understand and use NOSQL system types.
- CO4 Model and Build multidimensional data warehouse and apply ETL process to populate data to data warehouse.
- CO5 Perform Online Analytical Processing on the warehouse data.

**Course Prerequisites (if any):**

Digital Design, Basics of Computer Organization and Architecture

**Course Objectives:**

- 1.To explore internal architecture of microprocessor, interface with memory and I/O devices.
- 2.To build microprocessor-based systems.
- 3.To study the concept of multicore processors.

**Course Outcomes**

At the end of successful completion of the course the student will be able to

CO1: Explain the process of Compilation from Assembly language to machine language

CO2: Build Microprocessor based system using memory chips and peripheral chips

CO3: Analyze the techniques for faster execution of instructions and enhance performance of microprocessors.

CO4: Identify and describe multicore processors

**Course prerequisites (if any):**

Familiarity with linear algebra, multivariate calculus, and probability theory, Knowledge of a programming language

**Course Objectives:**

The main objectives of this course are:

- To learn the key aspects of Soft Computing and Neural Network.
- To understand the features of neural networks and different learning methods.
- To study Fuzzy Logic concepts.
- To gain insight into Neuro Fuzzy Modeling.

**Course Outcomes:**

**At the end of successful completion of the course the student will be able to**

- CO1: Identify and describe soft computing techniques and their roles  
CO2: Analyze various training algorithms of neural network and its architectures  
CO3: Understand various special Neural Networks.  
CO4: Design Fuzzy controller system.

**\*Term Work will consist of Practical covering entire syllabus of “MERN” -XXXXX. Students will be graded based on continuous assessment of their term work.**

**Course prerequisites (if any):**

Basics of HTML,CSS, JavaScript and Concept of Database.

**Course Objectives**

MERN Stack (Mongo DB, ExpressJs, Reactjs and Nodejs) is a very popular programming technology used for developing web apps as well as mobile Apps. MERN stack is many times faster than the traditional programming languages like PHP, ASP.NET, etc. Moreover, it can manage millions of users simultaneously without crashing the server.

**Course Outcomes**

**At the end of successful completion of the course the student will be able to**

|     |   |
|-----|---|
| CO1 | Summarize the concepts of various front-end, backend web application development technologies & frameworks.   |
| CO2 | Illustrate the concepts of various front-end, back-end web application development technologies & frameworks using different web development tools. |
| CO3 | Build a web app application, individually or in a team by combining various development technologies & frameworks for real-world problems.          |
| CO4 | Test the concepts and components of various front-end, back-end web app development technologies & frameworks using web development tools.          |

**Course Prerequisites:**

Basics of HTML, CSS, JavaScript and Backend Technology, and familiar with new versions of Text Editor.

**Course Objectives:**

The overall aim of the course is to build Commercial Web Applications using the MEAN stack. This course is meant for anyone who wants to start building full stack JavaScript applications in Node.js, AngularJS, Express and MongoDB.

**Course Outcomes:**

On completion of the course students will be expected to:

**CO1:** Build full stack applications in JavaScript using the MEAN technologies.

**CO2:** Architect MEAN stack applications from scratch

**CO3:** Develop modular, maintainable Single Page Applications using Angular 2 technology.

\* Batch wise Tutorial

### Course prerequisites:

Basics of HTML,CSS, JavaScript and Concept of Database.

### Course Objectives

This course is intended to obtain proficiency in Python programming and development of real-world web applications using Django by learning the basics and the advanced concepts like writing Python scripts, working with Databases, creating Views, Templates, Forms, Models and REST APIs in Django.

### Course Outcomes

**At the end of successful completion of the course the student will be able to**

- CO1: Understand the JQuery language & the Document Object Model along with Ajax usage which simplify data transfer to server
- CO2: Apply Django functionality and the Model-View-Template (MVT) paradigm for web development
- CO3: Develop Admin panel of web application along with database connectivity
- CO4: Discover advanced concepts such as REST API implementation and third-party module integration

**Course Prerequisites (if any):**

Basics fundamentals of HTML, CSS, Python programming

**Course Objectives:**

Flask is known for being simple, lightweight and having a small learning curve. Basically, Flask is an API of Python used for developing web based Application.

**Course Outcomes**

At the end of successful completion of the course the student will be able to

CO1: Understand basic Flask configuration along with routes and views for developing first web application

CO2: Apply Jinja Template Engine for rendering dynamic web content

CO3: Implement flask-wtf module for creating forms and SQLAlchemy toolkit for database connectivity

CO4: Build admin interface for Flask application and ensure security by implementing different authentication strategy

CO5: Discover advanced concepts such as REST API implementation and third-party module integration for testing and deployment of application

**Course prerequisites:**

Basic mathematical background of matrices and complex numbers and programming skills

**Course Objectives:**

1. Comprehension of fundamentals of Digital Signal Processing 1-D and 2-D
2. Application of various enhancement methods in time/spatial and frequency domain
3. Analysis of Digital image using segmentation, Morphological operation
4. Evaluation methods for synthesis of the image for information interpretation and for application development

**Course Outcomes:**

**At the end of successful completion of the course the student will be able to**

- CO1: Interpret fundamentals of discrete time signals and systems and signal manipulation methods.
- CO2: Apply various spatial and frequency domain enhancement techniques for 1-D signals and 2-D images.
- CO3: Analyze signals and images in frequency domain using various image transforms
- CO4: Evaluate extracted analyzed information for synthesis of digital signals and images.
- CO5: Design and develop applications based on 1-D & 2-D digital signals and images.

**Course Prerequisites (if any):**

Basics of Operating System and Computer Network

**Course Objectives:**

1. To understand the fundamentals of Information Security
2. To acquire knowledge on malicious and non-malicious programme errors and apply counter measures
3. To understand the various web attack
4. To apply different techniques to secure data in transit across data networks
5. To study and analyse the ethical issues

**Course Outcomes:**

At the end of successful completion of the course the student will be able to

- CO1: Explain various security goals, threats, vulnerabilities and controls  
CO2: Apply various cryptographic algorithms for software security  
CO3: Identify and analyse web attacks  
CO4: Illustrate and Compare network security mechanisms  
CO5: Interpret legal and ethical issues in security

**Course Prerequisites (if any):**

Data structures, analysis of algorithms

**Course Objectives:**

1. The objective of the course is to present an overview of artificial intelligence principles and approaches.
2. To enable students to develop a basic understanding of the building blocks of AI as presented in terms of intelligent agents: Search, Knowledge representation, inference, logic, and learning.
3. The knowledge of artificial intelligence plays a considerable role in some applications students develop for courses in the program.

**Course Outcomes**

At the end of successful completion of the course the student will be able to

CO1: Design AI solution with appropriate choice of agent architecture

CO2: Analyse and solve problems for goal based agent architecture (searching and planning algorithms).

CO3: Represent and formulate the knowledge to solve the problems using various reasoning techniques

CO4: Analyse applications of AI and understand planning & learning processes in advanced AI applications

**\*Term Work will consist of Practical covering entire syllabus of compiler construction. Students will be graded based on continuous assessment of their term work.**

**Course prerequisites (if any):**

Finite automata, pushdown automata etc. from Theory of Computer science.

**Course Objectives**

The course aims to give knowledge of the principal structure of a compiler and about the basic theories and methods used to implement the different phases of the compiler.

**Course Outcomes**

**At the end of successful completion of the course the student will be able to**

|     |   |
|-----|---|
| CO1 | Study phases of compiler and illustrate different parsing techniques and semantic analysis.                   |
| CO2 | Illustrate and analyze the different intermediate code generation techniques and run time storage allocation. |
| CO3 | Apply optimization techniques   |
| CO4 | Analyze and interpret the different issues in code generation phase   |

**Course prerequisites (if any):** Understanding of basic concepts of Database Management System and algorithms and Data structures.

**Course Objectives:**

1. To introduce the concept of data mining as an important tool for enterprise data management.
2. To enable students to effectively identify sources of data and process it for data mining.
3. To make students well versed in all data mining algorithms like classification clustering and association rule mining and their method of evaluation.
4. To approach business problems analytically by identifying opportunities to derive business values from data.

**Course Outcomes:**

**At the end of successful completion of the course the student will be able to**

CO1: To understand the concepts of data mining and its applications in business intelligence.

CO2: Preprocess and analyze data needed for data mining using different preprocessing techniques.

CO3: Apply & implement appropriate data mining algorithms like classification, clustering on larger data sets.

CO4: Discover interesting patterns from large amounts of data to analyse and extract patterns to solve problems.

CO5: Apply and analyze data mining for Business Intelligence Application.

**Course prerequisites (if any):**

Software Engineering, Programming Concepts & Algorithms.

**Course Objectives**

The objective of this course is to impart understanding of techniques for software testing and quality assurance. To help students to develop skills that will enable them to construct software of high quality - software that is reliable, and that is reasonably easy to understand, modify and maintain.

**Course Outcomes**

**At the end of successful completion of the course the student will be able to**

|     |  |
|-----|--|
| CO1 | Explore the fundamentals of testing.   |
| CO2 | Describe the various levels of testing and their use in designing of various test cases. |
| CO3 | Model various test cases for real life applications.                                     |
| CO4 | Outline software quality concepts  |
| CO5 | Identify software quality assurance goals and standards.                                 |

**Course prerequisites (if any):** Embedded system, Data networks and Adhoc networks

**Course Objectives**

To learn basic architecture of Wireless sensor networks and Internet of Things and understand WSN routing protocols and evaluate software ,hardware platforms for IoT technology. Also create applications using IOT analytics.

**Course Outcomes**

At the end of successful completion of the course the student will be able to

|            |  |
|------------|--|
| <b>CO1</b> | <b>Explain the basic architecture and working principle of wireless sensor networks and Internet of Things</b> |
| <b>CO2</b> | <b>Identify challenges and issues in WSN routing and suggest solutions.</b>                                    |
| <b>CO3</b> | <b>To use different Operating system for Wirelese sensor networks and IoT</b>                                  |
| <b>CO4</b> | <b>Evaluate the software and hardware platforms for IoT Technologies and design small IoT application.</b>     |
| <b>CO5</b> | <b>Create IoT application data using IoT Analytics.</b>  |

**Course prerequisites (if any):**

Basic Knowledge of Computer Networks, Layered Architecture, Structure and working related Protocols.

**Course Objectives**

1. To provide an overview of Mobile & Cellular Communication networks area and its applications in communication engineering.
2. To understand the various terminology, principles, concepts, Standards, algorithms and different methodologies used in Wireless Communication Networks specifically for Wireless Ad-Hoc Networks.

**Course Outcomes**

**At the end of successful completion of the course the student will be able to**

CO1: Explain the basic concepts of various wireless networks and their working characteristics with respect to mobile network generations such as 2G, 3G and beyond.

CO2 Compare infrastructure based and Ad hoc networks, elaborating characteristics and

features of Ad hoc Networks

CO3 Inspect designing of Wireless MAC protocols for Ad hoc networks; and the working principle of different WLAN IEEE standards.

CO4 Describe various Network Layer & Transport layer mechanisms and Routing Protocols for Wireless networks.

CO5 Explain various features and operations of Application Protocols of wireless Ad-hoc and Mesh Networks like sensor networks, VANETs etc.

**Course prerequisites (if any):**

Linear algebra  
Probability and statistics  
Multivariate calculus  
Algorithms and complexity  
Programming language such as C++, Java, Python

**Course Objectives:**

1. Introduction to fundamentals of Machine Learning
2. Study of application of various ML algorithms
3. Analysis Machine Learning algorithms
4. ML Algorithm based application development

**Course Outcomes**

**At the end of successful completion of the course the student will be able to**

- CO1: Comprehend the basics of Machine Learning.  
CO2: Apply and implement machine learning methods  
CO3: Analyze machine learning algorithms  
CO4: Design Dimensionality reduction techniques  
CO5: Develop Applications using Machine Learning methodologies

**Course prerequisites (if any):**

Practical knowledge of Java

**Course Objectives:**

DevOps and Microservices are the most important topics being used in IT industry. The main objective of this course is to provide in depth understanding of DevOps and Microservices concepts, frameworks, tools and technology. It also help students to practically build DevOps pipeline using Jenkins and build microservice based applications using Java , Spring Framework using best practices. This course shall make student ready to build modern applications as a part of their academic course curriculum and make them ready to get more opportunities in IT industry

**Course Outcomes:**

**At the end of successful completion of the course the student will be able to**

- CO1 Explain concept, importance and usage of DevOps and Microservices
- CO2 Apply DevOps best practices which include Continuous Development, Continuous Testing, Configuration Management, Continuous Integration, Continuous Delivery, Continuous Deployment and Continuous Monitoring
- CO3 To set up a basic DevOps pipeline
- CO4 Differentiate between traditional monolithic and microservice based applications
- CO5 Apply the Microservices patterns & principles for building microservice based applications
- CO6 Implement microservices using Spring Boot Framework and Java

**Course prerequisites (if any):**

Some mathematical maturity, in terms of understanding and working with mathematical definitions, concepts, and proofs, and elementary notions of logic, set theory, number theory, probability and statistics;

**Course Objectives**

In the era of Digital Computers and internet ensuring confidentiality, authentication, integrity of data during communication is very critical. This course impart students the knowledge of cryptographic algorithms and techniques to achieve same. It also introduces students to the advances in the area of cryptography

**Course Outcomes**

**At the end of successful completion of the course the student will be able to**

|            |   |
|------------|---|
| <b>CO1</b> | Explain fundamentals of Information Security and cryptography   |
| <b>CO2</b> | Demonstrate various Cryptographic Algorithms for securing systems   |
| <b>CO3</b> | Comprehend cryptographic hash functions, Message Authentication Codes and Digital Signatures for Authentication |
| <b>CO4</b> | Realize advances in the field of cryptography   |

**Course Prerequisites (if any):**

1. Fundamental knowledge on Operating system and Computer Networks
2. Basics of client/server programming and network protocols

**Course Objectives:**

Cloud computing has evolved as a very important computing model, which enables information, software, and other shared resources to be provisioned over the network as services in an on-demand manner. Students will be exposed to the current practices in cloud computing. Topics may include distributed computing models and technologies, Infrastructure-as-a-Service (IaaS), Platform-as-a-Service (PaaS), Software-as-a-Service (SaaS), virtualization, performance and systems issues, capacity planning, federated clouds, challenges in implementing clouds, data centers, hypervisor CPU and memory management, cloud hosted applications, and other advanced and research topics in cloud computing.

At the end of successful completion of the course the student will be able to

- CO1: Comprehend the issues related to cloud computing and its application  
CO2: Investigate the system virtualization and outline its role in enabling the cloud computing System model  
CO3: Analyse and apply cloud programming models to solve problems  
CO4: Build cloud services and applications  
CO5: Configure and experiment with advanced cloud technologies

**Term-Work:**

Term work will consist of experiments/ tutorials covering entire syllabus of the course “Cloud Computing”. Students will be graded based on continuous assessment of their term work.

**Course prerequisites:** Fundamentals of software engineering.

**Course Objectives:** The objective of the Mini Project is to address the real-world problems, find, implement and demonstrate the solution for the same through the courses learned in earlier semesters. Identify various hardware and software requirements for problem solution. It will also inculcate qualities such as meeting deadlines, making and following work plan. The Mini Project may be beyond the scope of courses learnt and interdisciplinary in nature.

**Course Outcomes:**

**At the end of successful completion of the course the student will be able to**

- CO1 Define the problem statement and scope of problem.
- CO2 Identify various hardware and software requirements for problem solution.
- CO3 Implement and test the hardware/ software algorithms to meet the desired Specifications.
- CO4 Analyze, interpret results and correspondingly modify the designed system to get the desired results.
- CO5 Prepare a technical report based on the project.
- CO6 Present technical seminar based on the Mini Project work carried out.

**Term Work and Practical / Oral:**

The mini project is a group project. Interdisciplinary projects are also permitted. Each project will be assigned to one faculty member as a supervisor.

There will be continuous assessment and progress report of the project that needs to be maintained by student(s). The final oral / Demo will be a presentation based on a demonstration of the project in front of a committee of examiners.
